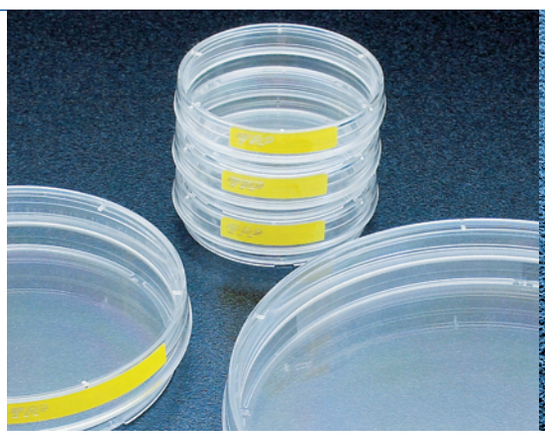
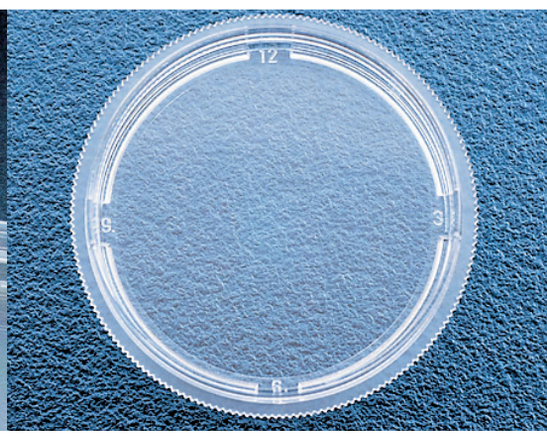
Tissue Culture Dishes

Large Surface and Secure Grip

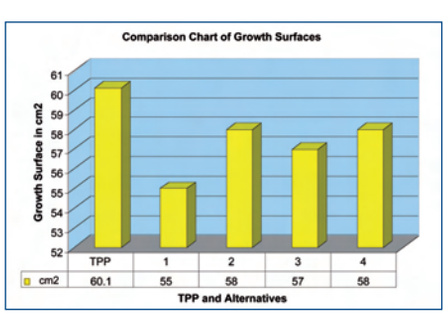


Tissue culture dishes from TPP with crystal clear surfaces.



Clock-numbering system inlaid in the base.

Convenient peel-off sleeve.



Comparison of growth surfaces.
*(*Source: internet)*

Proliferation

- *A completely flat growth surface provides even and consistent cell growth resulting in optimal cell proliferation.*
- *Large growth surface, up to 10 % larger than available alternatives*.*

Security

- *Gripping ring: often imitated, never matched! The spikes of the protruding edge on the dish base ensure a secure grip of the dishes. Accidental lift-off of the lid becomes a thing of the past!*
- *The convenient peel-off sleeve enables the dishes to be withdrawn easily without compromising sterility.*
- *Secure and stable stacking of several dishes is facilitated by a raised stacking ridge on the lids and bases edges. Stacked dishes can be securely transported from A to B.*
- *As an ideal product combination for a convenient tissue harvest we recommend the use of the cell spatula or the cell scraper with twistable blade.*

Documentation

- *Numerical orientation by the clock-numbering system inlaid in the base: divides the dishes into quadrants for quick and easy orientation.*
- *Excellent microscopy through crystal clear surface, also ideal for microphotography.*
- *Yellow inscription field on the lid and frosted inscription field on the base provide convenient labelling.*
